

Professional Disinfection and Decontamination Services for COVID-19

Chevron Highways Services is now offering specialist COVID-19 sanitisation and cleaning services. These services have been developed for the highways sector and can replace daily cleaning regimes, giving up to 30 days protection.

In line with government guidance, our Chevron Highways Services Division is providing the specialist COVID-19 sanitisation service for its highways clients covering assets including office buildings, factories, vehicles and plant, that have either been already affected by a confirmed case of Coronavirus or if there is a need to take preventative or precautionary measures.

Why sanitise?

Studies in offices have shown that germs can spread from an infected person to the entire office in 2–4 hours via contaminated touchpoints. They all need regular cleaning and disinfecting with approved products to ensure protection from infection.

The government's guidance on sanitising against COVID-19 says that employers should consider the specific conditions of individual places of work and comply with all applicable legislation, including the Health and Safety at Work Act 1974.

The risk of coronavirus (COVID-19) infection depends on many factors, including: the type of surface contaminated, the amount of virus shed

from the individual, the time the individual spent in the setting and the time since the individual was last in the setting.

All surfaces that the symptomatic person has come into contact with should be cleaned and disinfected, including all potentially contaminated and frequently touched areas, says the guidance.

Whether you are looking to sanitise assets that have been affected by a confirmed case of coronavirus or are taking precautionary measures, our highly effective disinfection techniques kill 99.9% of known viruses, including COVID-19 and other coronaviruses in a quick and cost-effective manner.

For more information about COVID-19 decontamination and deep cleaning, please contact: Steve Pope, Regional Director, The Chevron Group at steve.pope@chevrontm.com

Benefits:

- Fast, efficient service which causes minimal disruption to your work environment.
- Demonstrates to employees, customers, and regulators that pro-active measures have been taken to protect their safety.
- Kills 99.9% of known viruses, including coronavirus, with a highly effective technique as well as other viruses such as E. coli – protecting your workforce – keeping them safe and well.
- Long-lasting germ protection from the unique dry steam fogging method.
- Safe to use on even delicate surfaces (non-hazardous, non-toxic and bleach-free).
- Emergency sanitising support available on site within one hour, 24 hours a day.
- Trained and fully equipped disinfection teams using proven methods and safe systems of work.

Materials and Equipment:

- As part of our service, we provide ALL necessary cleaning supplies, including viricidal cleaning agents, disposable cloths, and specialist PPE for our teams.
- All waste generated from the cleaning and disinfecting process is taken away from your premises and disposed of safely.
- We operate a strict environmental policy in accordance with ISO 140001 and, unless otherwise stated and agreed, environmentally friendly materials and products will be used. All supplies will meet current COSHH regulations and British or European Standards.
- All equipment is Portable Appliance Tested (PAT) and is regularly inspected and maintained. If required, repairs will be undertaken off-site, and any equipment which cannot be repaired will be replaced.

What product do we use?

Professional V2 Healthcare Super Antiviral Disinfectant's (V2 Viricidal) powerful formulation kills a range of pathogenic viruses in under five minutes, including COVID-19. The formula is safe to use on all surfaces, and is non-hazardous, non-toxic, and bleach-free. It is effective against all enveloped viruses as defined in EN 14476:2-13 +A2:2019, including coronaviruses such as SARS-CoV-2. When used as directed, treated surfaces are safe for human contact within an hour, making it a convenient and essential tool for preventing infections at the workplace.

For more information about COVID-19 decontamination and deep cleaning, please contact: Steve Pope, Regional Director, The Chevron Group at steve.pope@chevrontm.com

What service are we offering?

- After evaluating your needs with you, we will put together a cleaning and disinfection action plan that is tailored to your site, equipment, and ways of working.
- When undertaking cleaning operations, Chevron's specialised technicians first identify the high-risk areas. These are then targeted for spraying and, if desired, a scheduled spraying programme can be developed to ensure that surfaces remain sanitised. Alternatively, reactive decontamination can be used for areas that are known to be contaminated or fogging for delicate areas or surfaces.
- The process can include an initial deep cleaning service using a sanitiser to give your premises and equipment a thorough clean, focusing on high- frequency touch points, such as door handles, taps, work surfaces and light switches.
- We can provide cleaning services for bathrooms, kitchens, outdoor areas, and plant and machinery. Whilst optional, an initial deep clean greatly enhances the effectiveness of the disinfection process by removing dust, dirt and debris.
- After the deep cleaning process, sanitisation and disinfection is carried out using a dry steam fogging machine in conjunction with the powerful broad-spectrum disinfectant spray (V2 Viricidal).
- Upon completion, a full specialist report can be provided if required, detailing the areas and surfaces covered, completion date and time, next scheduled service, the team that attended site, and any completion pictures. Sign boards with the date of the last clean and next upcoming treatment can also be installed in the area, giving staff and visitors peace of mind.

Our accreditations:

Our service is provided to a high standard in line with industry standard quality accreditations, so that you have the peace of mind of knowing they are getting a professional standard of service.

Our accreditations include:

- ISO9001 Quality Management and all relevant Sector Schemes 12 A/B/C/D and 18
- ISO14001 Environmental Management
- ISO44001 Collaborative Working
- ISO45001 Occupational Health & Safety this is also SSIP (Safety Schemes in Procurement) accredited which will also negate some per-qualification questions
- ISO50001 Energy Management which ensures the Group is compliant with the ESOS Regulations.

What are customers already saying:

William Sheldon, Site Supervisor at Volker Highways has already used the new Chevron cleaning service, he said: **"The team mobilised very quickly and has been doing an excellent job for us. We needed to respond quickly to reassure the public, staff and our client that decisive action was being taken on their behalf. The decontamination service has been an important component of our strategy. Whilst on site, the team mechanically swept all paths and walkways and litter-picked the area, which was an excellent added service. We are 100% happy that when our teams are at work, they will be 100% safe."**

For more information about COVID-19 decontamination and deep cleaning, please contact: Steve Pope, Regional Director, The Chevron Group at steve.pope@chevrontm.com

How do we make our people and work zones safe?

THE PROCESS

What do I need?

Contact Chevron – Highways & Facilities Services Division by telephone, email or via website to develop a cleaning & disinfecting plan for you.

When do I need to clean?

Our Teams will come to your location and undertake a deep clean & viricidal disinfectant fogging application.

Preparing to clean

Inform your staff of the date that the cleaning teams will be undertaking the works. Leave all offices, vehicles, machinery & work sites tidy and free from loose paper & valuables.

After cleaning

We recommend that once the team has been in and undertaken the cleaning, the areas sanitised by the fogging application must be left empty for at least 1 hour before staff can re-enter.
